

## Remote Capture Video Equipment Questions

Our remote video capture process uses your smartphone, tablet, or webcam to record footage. But to produce the highest possible quality video, you will need the right lighting and sound accessories. Please answer the following questions—to help us plan for the equipment you may need.

1. How comfortable are you with using your devices for filming?
2. Do you have more than one device?
3. What kind of devices (smartphones, tablets, webcams) will you be using to record your video?
4. What is the manufacturer and operating system (e.g., iOS, Android, Windows) for each device? It's OK to say "iPhone 10" or whatever you're planning to use.
5. How many people will be recorded in the video?
6. Will you be recording indoors and/or outdoors?
7. Will you be recording while sitting or standing in one place—or while in motion?
8. Do you need a teleprompter?
9. What and where are the light sources at the location where recording will take place?
10. Do you have any special effects or backgrounds in mind that would require a green screen?
